

World Happiness Report 2019 Dashboard

Dashboard link:

https://public.tableau.com/app/profile/farouk.alghazzy/viz/Dashboard_17628953379710/Dashboard1?publish=yes

Main conclusions:

Higher GDP per capita strongly correlates with higher happiness scores. Northern European countries consistently rank among the happiest.

Filters and Highlight Features:

Users can filter the data by region or GDP per capita to focus on specific geographic or economic segments. The interactive highlight feature allows users to hover over a country or region to instantly emphasize corresponding data across all visualizations, making it easier to identify patterns, regional clusters, and outliers.

Chart Selection and Design Practices:

Three chart types were chosen to balance clarity and analytical depth:

- A **bar chart** ranks the top ten happiest countries for quick comparison.
- A **map visualization** shows global happiness distribution with an intuitive color scale.
- A **scatter plot** illustrates the correlation between GDP and happiness scores.

Design best practices include a consistent color palette, readable sans-serif fonts, logical F-shaped layout, and clear labeling. The dashboard avoids unnecessary decoration, ensuring users can quickly interpret the data and explore insights through interaction.
