

This choropleth map displays total COVID-19 cases by country, with darker shades representing higher case counts. The visualization shows that the United States, India, and Brazil had the highest totals, while most African and smaller island nations reported comparatively lower numbers.

This bubble map visualizes total COVID-19 cases around the world, where larger and darker red circles represent countries with higher case counts. The United States, India, and Brazil stand out with the largest bubbles, showing they had the highest reported totals, while many African and smaller island nations had far fewer cases.

Global COVID-19 Total Cases (Density Map)

This density map visualizes where COVID-19 cases were most concentrated globally. The red and orange hotspots show the highest case densities in regions like the United States, Europe, Brazil, and India, while much of Africa and Oceania display lighter colors, indicating lower overall case concentration.
